1. Transverse Dunes
2. Barchan & Linear (Barchans) } winds come from one direction
3. Longitudinal Dunes
4. Star Dunes ... are found in areas where winds blow from all directions

1. dominate winds carry fine sand grains away - leaving behind a deposit of coarser particles.
2. scarcity of sand, winds from different directions.
3. strong winds carry fine and coarse grains and end up tangle through the MASS of sand.

Transverse Dunes | Barchan | Longitudinal Dunes | Star Dunes
